Hi Jenna,
Thank you to you and your team for all the hard work.

I think that near the top of the vision statement we need to say that:

Every year for the next 20 years (2025-2045), it is our vision to do our part to be on track for meeting the state's emissions reduction targets. (45% below 1990 levels by 2030 and 95% below 1990 levels by 2050.)

In addition to solar, we need battery storage.

People just assume that more energy resources will just magically appear. Last summer, we were so short of electricity, that Clark PUD had to pay 10 times the usual price for electricity. Where did they get it? From polluting peaker power plants in the region (Wyoming, Nevada, California, Oregon.)
