---

Good day, Jainey,

Thank you for your comments regarding the 2025 EIS Update. I have forwarded them to staff, and will add these to the Index of Record.

### **Message Subject**

The Environmental Improvement Statement Concerns

### **Comments**

Statement of Concern:

I am concerned with the push for electric vehicles. I don't feel that will solve all of our fossil fuels.

Current State of the Element:

Right now, most of our cars are gas ran. However, the government is trying to get everyone to move over to electric cars because "all of the air emissions are coming from the cars", but have they ever looked at the other transportation sources? Let's take planes.. What about trains?

Boats? Buses? All of these transportation sources are very useful to us and all that is around us but we don't need to change those and only need to change the cars. Side note: if we move all of our resources to electrical, then they'll have the monopoly and that doesn't sound very good.

Why are you Concerned:

I am very concerned because all of the emissions and carbon dioxide in the air is making our environment worse all of the time, and it's only gonna get better when everyone works together and helps each other get rid of all emissions.

Solution:

We could try to turn our transportation into things that'll give off less emissions. Such as the max train, in Portland, Oregon. The MAX (Metropolitan Area Express) Light Rail connects Portland City Center with Beaverton, Clackamas, Gresham, Hillsboro, Milwaukie, North/Northeast Portland and Portland International Airport. So this train doesn't go anywhere else other than the areas around it, and it needs to go further. Or it needs to be more and be more spread out. Electric buses are also another way we can slow down emissions. Electric or maybe even hydropower transportation can help everyone get around and be able to go around for a while and then not have a lot of emissions everywhere. Airplanes are another very bad thing, because of all of the emissions that they leave in order to fly, and the noise pollution that happens from the planes. Kerosene is something that is inside of these plane emissions and the kerosene is really bad and it's PM 2.5 which is very bad for those who inhale it. This also goes against the Clean Air act, that limits the amount of Particulate matter(PM) into the air. All together the transportation needs to be fixed due to the amount of people that there are in this constantly growing world. If we do not do something soon, these next few generations might not live a very nice life.
