**Subject:** My suggestions for the EJC draft phase 3 Survey questions

**EXTERNAL:** This email originated from outside of Clark County. Do not click links or open attachments unless you recognize the sender and know the content is safe.

1.

This survey will take approximately 5 minutes to complete.

Have this at the top of the page because people want to know how long this is going to take from their day and if it says 5 minutes to complete they'll be more inclined to do the survey.

2.

\*The graphics look blurry and so I hope that will be corrected. It was a little hard to read.

\*I really like the graphic of the greenhouse gas box next to the person next to the house. I've never seen that before and it really helped me have a visual.

3.

I don't know everybody's education level, but the 'MT CO<sub>2</sub>e' and the '6.1 MT CO<sub>2</sub>e per capita' I think should be explained.

4.

'Think about the major local emissions sources of greenhouse gas air pollution in Clark County. Please rank the pollution sources in order of most to least important to address to benefit you and your family.'

My wording edits,

Please look back to graph 1 with the major local emissions sources of greenhouse gas air pollution and then prioritize those pollution sources in terms of their importance to address for the benefit of you and your family.

Also the word 'address' maybe change to 'get to first' or 'take on first' or 'tackle' or 'prioritize'

5.

Maybe providing some examples for each emission source more than just the one picture that's on the graph. Maybe having 2-3 examples for each category.

6.

With the air quality map, I think it would be useful to maybe have some landmark points on the map so that people can see where they live close to. Examples, maybe putting a pin for the mall, the library, the hospitals, maybe even putting some major roads in the map like Andresen, Mill Plain or 164th.

7.

'Think about where your family lives, works, and plays in the county. Please share any suggestions you have to make sure actions the county takes to reduce air pollution will benefit you and your family.'

My edit,

Think about where your family lives, works, and spends time in the county. Please share any ideas you have to make sure the actions the county takes to reduce air pollution will benefit you and your family.

8.

'Some places and people in the county are more impacted by bad air quality than others. Please also share any suggestions you have to make sure actions the county takes to reduce air pollution will benefit those who are most impacted by bad air quality already.'

My suggestions,

"Some places and communities in the county are more impacted by poor air quality compared to others. How can the county ensure that its efforts to reduce air pollution are targeted towards benefiting those who are already most affected by it? Please provide any suggestions you may have."

Or

"Not everyone considers the impact of their actions on others. How can the county ensure that its initiatives to reduce pollution not only benefit you and your family but also address the needs of those who are most affected by poor air quality? Please share any suggestions you have."

9.

Source: Washington Environmental Health Disparities Map, <https://fortress.wa.gov/doh/wtnibl/WTNIBL/>, PM2.5 concentration by census tract. PM2.5 is a measure of air quality using field concentrations of particulate matter (PM) which are very small (2.5 microns or less in diameter).

'2.5 microns or less in diameter'

Could there be a picture provided like the one with the greenhouse gas and the box and the house for understanding what 2.5 microns are less in diameter looks like?

10.

How do you identify your race and ethnicity?

My suggestion,

Having an option for 'Human'

11.

Which of the following describes your current living situation?

My suggestion,

Also when asking about their current living situation is if they are struggling with their rent. How can we have a flourishing society if we have our communities struggling with housing?
