Hi Jude,

I was just reviewing the phase 4 engagement question edits you sent over yesterday, and I'm not seeing your suggestions in the document. Would it be possible to re-send, to make sure we're reviewing the correct version?

Thanks!

Jenna

Hello Jenna etal,

The attached draft has some edits, comments and question. My input is quick, off the top, and all this is with great respect for the very challenging job you are all doing so well.

Attached == I'm not sure whether I'm answering the survey by inserting additional "ideas" or suggesting additions. It's already too long but does not explore some key topics...

I previously wanted to chat about the survey approach itself, but obviously you are using the same approach. Who is designing the survey? I don't know if you responded to previous comments inserted. My query is about the justification or validation of the Check One approach and the actual categories. I also still find "me and my family" strange. The implied scale (without a scale). Where do the ideas come from? Are you interested in actual scientifically implied "ideas" for climate action?

I recall someone adding "my family" to the "me" but it still seems too narrow... no "neighborhood" or "Community" or livelihood. I suppose everything comes down to how it affects the "me" but really ---

I know, someone suggested we could insert "farm" into a custom survey for Farm & Food Justice Network

Which I am still working on -- in between other deadlines (this), farmers market outreach, and job applications, webinars, and a Toastmasters meeting.

So yes, we need a slightly additional extension on our already tardy revisions for Phase 2-3 of the workplan. It's tempting to redesign a survey, but that's not in the budget ! So I'm trying to compromise and edit yours, ANd hope there's enough intersection that we are ADDING to the County data, not creating a separate and non-aggregatable input. We're marginalized enough...as there's NO agriculture "element"

thanks for your patience and diligent engagement!

jude

Good morning Clark Co. Climate Project Environmental Justice Coalition,

We are writing to provide draft phase 4 engagement questions for your review and consideration. These questions were primarily based on the group's discussion at the Aug. EJC meeting combined with a list of possible draft greenhouse gas reduction ideas that are common best practices.

<u>Review Requested:</u> If of interest, please review possible engagement questions for the fourth phase of the county climate project about possible greenhouse gas reduction policies. If you have any suggested revisions, please send them to Jenna/Amy/Lauren **by EOD Thursday, Sep. 12**. You can provide revisions directly in the document in track change and comments or send us an email with your thoughts.

Your time spent reviewing these materials may be included in your September invoice for county meeting preparation and attendance.

We plan to revise the questions again after receiving your suggestions.

Thanks!

Jenna

#### Survey on Climate Action Ideas for Reducing Greenhouse Gas Pollution

This survey will take approximately x minutes to complete.

The Clark County climate project team is seeking community input to help plan for climate change through a series of activities throughout the year. Right now, the project team is focused on planning to reduce greenhouse gas pollution created here in Clark County to improve air quality and our community's health and environment.

Washington State requires Clark County to identify actions it will take over the next 20-years in the unincorporated county (areas outside of cities) to address climate change. This includes a requirement to reduce greenhouse gas emissions produced by local activities. (Several cities in the county are also working on similar projects to address greenhouse gas pollution within their boundaries.) While the county's work is focused on what we can do locally, climate change is a global challenge and there is additional climate work being done regionally, across the country and globe.

Greenhouse gases are gases that trap heat in the atmosphere. These gases are helpful in making planet Earth warm and supporting people, plants, and animals. However, too much of these gases from pollution can have significant negative impacts.

We invite you to:

- 1. Share your priority interests
- 2. Share your thoughts on possible actions to reduce greenhouse gas emissions in our community.

The climate project team, made up of project staff, consultants, and advisory groups, will use this information to inform the next phase of the planning process: finalizing a proposed list of actions the county can take to reduce greenhouse gas emissions, improve air quality, and reduce the impacts from climate change.

Your answers are anonymous (we don't know who you are). Your participation is voluntary. You may choose to skip questions. Your participation provides valuable feedback to help shape future community plans.

---

The climate project team will share summary results from this survey and other community engagement efforts on the project website.

You can learn more about the county's climate project and stay engaged in next steps here: <u>https://clark.wa.gov/community-planning/climate-change-planning</u>.

#### Your Interests and Well-being

1. This survey will focus on reducing greenhouse gas pollution in Clark County, but we recognize that you may have other priority concerns outside of this topic. What would you like to share that you're concerned about, including you and your family's overall health and well-being, before spending time providing feedback on the greenhouse gas pollution topic?

## **Climate Action Ideas**

Through a previous community survey and engagement activities, we collected preliminary feedback on a few common greenhouse gas reduction ideas and collected additional suggestions. This survey builds on that information and focuses on a longer list of options for your consideration.

The following questions are about possible ideas to reduce greenhouse gas pollution in different aspects of our community.

2. How will the following climate action ideas affect your daily life? Will they make things better or worse for you and your family? Please check one response for each idea. Please assume all listed ideas would be accessible to you and your family.

Possible Climate Action Ideas	Makes things better for me and my family	Makes things worse for me and my family	Could make things better or worse. It depends on the details	Does not make things better or worse	Unsure
